

TALYSMAN

PRIVATE BETA · INSTALL GUIDE

Get set up in about 5 minutes.

Install the desktop app, connect the Chrome extension, and unlock Pro with your complimentary beta code.

Follow these steps in order

1

Desktop app

Installs the service that powers blocking.

2

Chrome extension

Connects Talysman to your browser.

3

Comp code

Unlocks Pro on your Talysman account.

THANKS FOR HELPING US TEST TALYSMAN

1 Install the desktop app

The desktop app carries the service that does the actual blocking.

DOWNLOAD FROM

talysman.app/download ↗

Windows

Windows 10/11 · 64-bit

macOS

Apple Silicon or Intel

Linux

Debian/Ubuntu · x86-64

The download page detects your operating system. Choose the matching card, run the installer, and follow its prompts.

WINDOWS BETA

If SmartScreen says “Windows protected your PC,” click **More info** → **Run anyway**.

MACOS BETA · DMG INSTALL

The beta DMG is not yet notarized by Apple. These steps bypass a macOS security protection. Only continue with a DMG from the Talysman download page or the beta link we sent you.

- 1 Open the downloaded `.dmg`.
- 2 Drag **Talysman** into **Applications**, then eject the Talysman disk image.
- 3 Open **Applications** and double-click **Talysman**. When macOS warns that it cannot verify the developer or check the app for malicious software, click **Done** or **Cancel**.
- 4 Open **Apple menu** → **System Settings** → **Privacy & Security**, then scroll to **Security**.
- 5 Find the Talysman blocked message and click **Open Anyway**. This appears for about one hour after the blocked launch attempt.
- 6 Authenticate when prompted, then confirm **Open**.

macOS saves Talysman as an exception. Future launches work normally. Open Talysman once and leave it running.

2 Load the Chrome extension

The extension blocks sites in your browser, so this step is required.

Choose a permanent location. After unzipping the extension folder, do not delete or move it. Chrome loads it from that exact location.

chrome://extensions

- 1 Unzip the folder we sent you somewhere permanent. **Documents** is a good choice.
- 2 Open Chrome and enter `chrome://extensions` in the address bar.
- 3 Turn on **Developer mode** using the toggle in the top-right.
- 4 Click **Load unpacked** in the top-left.
- 5 Select the extension folder you unzipped, then click **Select** or **Open**.

Connected. Talysman appears in your extensions list and pairs automatically with the running desktop app. You can pin it from Chrome's puzzle-piece menu for easy access.

If Chrome disables the extension after a restart, return to `chrome://extensions` and re-enable it. This is normal for extensions loaded outside the Chrome Web Store.

3 Redeem your comp code

Either option below unlocks Pro on your account.

YOUR CODE LOOKS LIKE

TLY-XXXX-XXXX

Inside the app

RECOMMENDED

- 1 Open the Talysman desktop app.
- 2 Choose **Account** in the sidebar.
- 3 Sign in or create an account.
- 4 Click **Redeem a code**.
- 5 Paste your code and click **Redeem**.

From your link

Open the link we sent, which looks like:

`talysman.app/redeem/`
`TLY-XXXX-XXXX`

If needed, sign in or create an account. You will return to the code and redeem it with one explicit click.

Your plan changes to **Pro** and the badge on the Account page updates. Syncing everywhere can take up to about five minutes.

YOU'RE SET

Desktop app
running

Chrome extension
loaded

Account shows
Pro

Now make it yours. Add sites to your Blocklists, set a Schedule, and explore. If anything looks off, send us a screenshot of the Account page and tell us what you were doing. Thanks for helping test Talysman!
